

## **International Alliance of ALS/MND Associations**

### **Partnership Program**

**As you know we are a small and poor Organisation with no financial support or any kind of help, but we do our best as far as we can to help our patients with ALS and other Motorneuron disorders.**

**This is the first time that we ask for such kind of help.**

**Yugoslav MND Association is in the phase of organising its First ALS Center within the Institute of Neurology Clinical Center of Serbia, Belgrade. The aim of this Project is to provide more advanced methods in diagnosing ALS and other Motorneuron disorders, so that the patients could get better medical care from the team of various health care professionals and could get better opportunity to socialize and thus exchange views and experience about their disease.**

**Having in mind this, we would like to ask you for help, in other words, we would like you to provide some of the equipment such as:**

**1 One Stardust® machine which is very useful and comfortable for early diagnosing and monitoring MND patients who have initial respiratory impairment.**

**2. One Micro RPM (Respiratory Pressure Meter) which measure  $P_{I\max}$  /MIP (Maximal Inspiratory Pressure at the Mouth;  $P_{E\max}$ /MEP (Max. Expiratory Pressure at the Mouth) and SNIP (Sniff Nasal Inspiratory Pressure) .**

**3. One ordinary apparatus for measuring SNIP**

**These gadgets needn't be new, we could do with the second hand ones.**
